Change Request- CRM Implementation (2nd Version)

CR Info:

CRM Query & Ticket Management.

Requested by:	**Date:**
Distribution Business team V.1	17th November 2025
Distribution Business team V.2	12th January 2026

Request name:	**Request number:**
CRM & Ticketing Implementation	**D-03**

Change description:

Currently in our DMS(As-Is) -
We have Docket Talk functionality in our TMS to record conversation regarding the concerned docket number.
IMPACT-
Communication is only recorded for the specific docket related operations only **without** associating it to concerned customers.

Process required(To-Be) -

- The purpose of this change request is to enhance the existing TMS (Transport Management System) by integrating a **CRM Query & Ticket Management module**.
- This module will enable seamless recording, tracking, and resolution of customer queries raised through multiple channels (Portal / Call / Email). The system should automate ticket creation, routing, SLA tracking, and reporting to improve response and resolution efficiency.

IMPACT-

- Resolutions to the customers can now be provided in a timely manner with proper process mapping and recordings..
- It will increase customer satisfaction and retention.

Implementation reason:

1. Automating the concerns by the customers to provide better customer experience.
2. Streamlining and recording the queries raised by the customers and solving them in a timely manner.
3. Preventing repetitive customer complaints, hence increasing the process value.

Impact of change:

- **Scope**:
  - Query capturing and ticket creation across multiple channels
  - SLA management and escalation
  - Ticket assignment logic based on client and CRM team mapping
  - Customer communication via Email, SMS, and WhatsApp
  - Dashboard and reports for SLA compliance and customer feedback
- **Timeline**: TBD
- **Communications**: Empower , CJ Darcl IT & Business.

Functional Requirements

Ticket Creation

Description:
Customer or CRM team can raise a query through any of the following channels:

- Customer Portal (Website)
- Email(Manual entry by CRM member)
- Phone Call (Manual entry by CRM member)
- TMS interface (Manual entry by CRM member)

Captured Information(in the customer portal):

- **Docket Number (Used for linkage with shipment and its respective billing party)**
  - With Docket and Without Docket Radio button required.
  - Docket number is to be provided as selection criteria for ticket punching.
  - With Docket-
    - When With Docket option is selected by the end user.
    - The system should auto-show the Billing party name associated with the selected docket.
    - After submission of that respective ticket, it should auto assign to the concerned CRM member appointed for that particular customer.

CJ Darcl Logistics

        - Note - A dedicated CRM member is to be mapped with every billing customer.
    - Without Docket Number -
        - Three mandatory fields needs to be captured-
            - Email ID
            - Mobile Number
            - Ticket Creator Name
- Customer Name
    - In case of With Docket option - To be pre-populated from Docket number
    - In case of Without Docket option - To be captured by the end user(Ticket Creator)
- Contact Number
- Email ID
- Query Category
    - Remarks / Description
    - *Delivery Status,*
    - *Wrong Delivery,*
    - *Partial Delivery,*
    - *Urgent Delivery,*
    - *POD Required,*
    - *Others.*

Ticket Assignment & Acknowledgement -

- **Rule-based Routing Logic(In case option is "With Docket"):**
  `Docket >> Client (Billing to Party) >> Respective CRM Team Member`
- The system automatically assigns the ticket to the mapped CRM member.
- Notification sent to assigned CRM member via system notification/email.
- Ticket Acknowledgement send to customer via Email
- All the communication that will happen on the raised ticket should be captured along with the History so that it will be easy to understand the working that is being done on the ticket and same is measurable as well.

Ticket Acknowledgement Sample:

Subject: Ticket [CJD_CRM-20251001-001]
Hi {Customer Name}, we have received your query about shipment {Docket number}. Your ticket id is CJD_CRM-20251001-001. Our team will respond by {SLA timer/ Next Working day}.

Ticket Number Format -

- Each ticket should have a **unique Ticket ID** in the format as given below:
  CJD_CRM-[YYYY~~MMDD~~]-[Sequence No.]
  e.g., CJD_CRM-2026~~0201~~-001

- Ticket linked with:
  - SLA Timer (based on Priority)
    - Priority Level: Low / Medium / High

Ticket Closure Process -

- After "marking close" the tickets -
  - Auto mail with following buttons should be sent -
    - Accept and Provide Feedback(Rating(1 - 5))
    - Re-open this Ticket
  - If Customer fails to respond - Ticket should auto-close after the timeframe of 48 hours.

Tracking Matrix required in the reports and same is to be reflected in the dashboard-

- SLA % compliance
- Average resolution time
  - SLA and Avg resolution time is to be calculated by the following data- **SLA table (by priority) – Working hours 9 AM to 7 PM**

Priority	Response SLA	Resolve SLA
High	1 hours	2 hours
Medium	8 hours	12 hours
Low	12 hours	24 hours

- Open vs Closed tickets
- Complaint categories trend
- Customer satisfaction score / feedback scores / Rating summary.

Associated cost & Mandays:

TBD
